

# Pictorial Meadows Green Roof Seed Mix

Green Roofs are vegetated layers that sit on top of the conventional roof surfaces of a building. They are composed of lightweight layers of free-draining material that support low-growing tough drought-resistant vegetation.

Because of their very wide range of environmental and economic benefits, green roofs have become important elements of sustainable and green construction in many countries.

Pictorial Meadows Green Roof seed mix is designed to provide a bio-diverse ecosystem attracting birds, bees, butterflies and beneficial insects as well as a colourful Pictorial Meadows display.

Being seeds, they provide a very cost effective solution compared with sedum mats or plug plants.

Both attractive and able to withstand the rigours of a roof top environment this mix contains species such as: *Chives, Oregano, Blue Fx, White Stonecrop, Tunic Flower and ornamental grasses.*

It can be purchased in quantities from 20 grams upwards and the suggested sowing rate is 1g per square metre
